

Presentation of **ATLANTIC SEALING MACHINE** for fish bags

Atlantic has recently developed sealing machines for closing of sandwich bags.

These were first intended for frozen fish and shellfish products, frozen in vertical and horizontal plate freezers. In Norway, this is normally for fish frozen in 25 kg. (Half block), 50 kg. (Whole block) and frozen Industrial shrimp in the same vertical plate freezers.

For bags with bigger opening than approx. 75 cm, is the sealing operation to be in 2 steps. However, all sizes of bags can be used.

The sealing machine has become very popular in Norwegian fisheries but is also sold to US and Russian fishing vessels. The only requirements are sandwich bags.

Atlantic sealing machines are specially built for the very humid environment. All electronics are situated in a waterproof cabinet.

The Atlantic sealing machine is also solid, built in stainless steel and simple to maintain. It operates fast and simple.

The machine is easy to install either in a fully automatic processing line or as a self-standing unit. They can be delivered in version for **vertical** or **horizontal** operation.

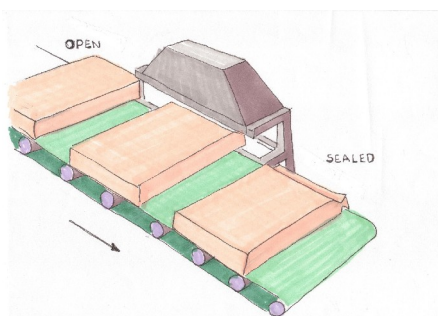

The **Atlantic** sealing machine requires no adhesives as glue, straps, tape etc.

Technical specification:

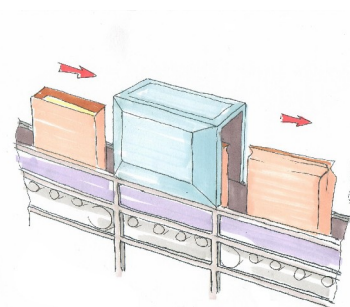

Current: 220 v, single phase, 2000 w, 10 Amps.

Air: 6-7 bar

Sealing time: 3-4 sec.

Horizontal conveyor belt

Vertical conveyor belt
